

OFFICE WASTE & ENERGY

Our office is more than just a workspace—it's a reflection of our commitment to sustainability. We're dedicated to making every process within our workplace as eco-friendly as possible.

We've taken thoughtful steps to ensure our offices set the benchmark for eco-friendliness. From waste management and thermal proofing to optimizing our heating, cooling, and lighting systems, we're focused on reducing energy consumption in every way possible. A standout example of our dedication is our comprehensive recycling program. Used batteries are either repurposed internally or donated to schools and associations after rigorous testing. Projection screens and canvas décors are given new life through donations to the 'Pro Genève' foundation's 'sewing and upcycling' department. Our partnership with Serbeco SA, an ISO 14001, ISO 9001, and ISO 47001 certified waste management company, underscores our commitment to responsible disposal practices.

Our office building is equipped with geothermal temperature regulation, eliminating the need for energy-draining air conditioning, and serves as a tangible example of our sustainability efforts. We closely monitor our electrical consumption and actively seek eco-friendly options from 'Services Industriels de Genève.'

All these initiatives are carefully documented in our annual carbon footprint report, where they are identified as 'Significant Environmental Aspects.' Our offices are a testament to our unwavering commitment to a greener future.
